

# RASANJA GUNASEKARA

## SOC ANALYST | CYBERSECURITY ANALYST | SECURITY OPERATIONS

0771156103 | rasanjagunasekara2000@gmail.com | Colombo, Sri Lanka | [linkedin.com/in/rasanja-gunasekara/](https://www.linkedin.com/in/rasanja-gunasekara/) | [github.com/Razahhh](https://github.com/Razahhh)

### PROFESSIONAL SUMMARY

Cybersecurity professional with 2+ years of hands-on experience spanning SOC operations, SIEM monitoring, security alert investigation, vulnerability assessment, risk assessment and enterprise security. Hands-on experience with FortiSIEM for alert monitoring, log analysis, event correlation, investigation, validation and false-positive review. Experienced with Nessus, Nmap and Qualys, plus endpoint security, DLP, SASE/SSE, IAM and MDM. Strong academic and research exposure to Linux, Python, secure code review, ethical hacking, penetration testing and application security. Confident communicating findings, risks and remediation recommendations to clients, vendors and technical teams.

### CORE SOC & CYBERSECURITY SKILLS

- **SOC:** FortiSIEM; SIEM Monitoring; Alert Triage; Log Analysis; Event Correlation; Incident Investigation; False-Positive Review; Incident Response Support
- **Vulnerability:** Vulnerability Assessment; Risk Assessment; Nessus; Nmap; Qualys; Remediation; Security Hardening; Web & Network Security Testing
- **Security:** Endpoint Security; DLP; SASE/SSE; IAM; MDM; Threat Detection; Security Research; Technical Reporting
- **Application:** Ethical Hacking; Penetration Testing; Secure Code Review; Secure Coding; Application Security; Security Issue Analysis
- **Systems:** Linux; Python; Network Security; Operating Systems; Cybersecurity Tools; Security Testing
- **Communication:** Client/Vendor Communication; Technical Walkthroughs; Presentations; Documentation; Stakeholder Collaboration

### PROFESSIONAL EXPERIENCE

#### ASSOCIATE SECURITY ENGINEER

Thakral One (Pvt) Ltd, Colombo, Sri Lanka | Jan 2025 – Present

- Conduct vulnerability assessments and security risk assessments to identify weaknesses, evaluate business impact and recommend remediation.
- Analyze vulnerability findings, prioritize risks and support technical teams with remediation and security-hardening recommendations.
- Plan, deploy, configure and support enterprise endpoint security, DLP, MDM and SASE/SSE solutions.
- Support Sophos Central, Netskope, Trellix, SOTI MobiControl and ManageEngine, including troubleshooting and post-implementation support.
- Investigate security configuration and deployment issues and collaborate with clients, vendors and internal technical teams.
- Communicate security findings, risks, remediation recommendations and technical outcomes through reports, walkthroughs and client discussions.

#### TRAINEE CYBERSECURITY ANALYST

Aion Cybersecurity, Colombo, Sri Lanka | Jun 2024 – Dec 2024

- Monitored and analyzed FortiSIEM alerts to detect, investigate, validate and escalate potential security incidents.
- Performed SIEM log analysis and event correlation to identify suspicious activity and support security-event investigations.
- Reviewed potential false positives and distinguished legitimate activity from security-relevant events.
- Supported incident-response activities including investigation, root-cause analysis, escalation and security-event documentation.
- Conducted web-application and network vulnerability assessments using Nessus, Nmap and Qualys and recommended remediation.
- Prepared vulnerability and incident reports with actionable mitigation recommendations and supported patch verification/security hardening.

#### SOC / CYBERSECURITY INTERN

Asia Asset Finance, Colombo, Sri Lanka | Feb 2024 – Jul 2024

- Performed SOC-related security monitoring and analysis using FortiSIEM, supporting identification and investigation of suspicious security events.
- Reviewed security alerts and logs, assisted with event validation and supported investigation and escalation of security-relevant activity.
- Collaborated with technical teams on security issues and supported incident documentation and remediation activities.

### SECURITY RESEARCH & ACADEMIC PROJECTS

#### AI-Enhanced IAM System for Internal Banking Systems in Sri Lanka

Designed an AI-driven IAM framework to strengthen authentication, authorization and access control. Integrated behavioral biometrics as an adaptive authentication layer to detect anomalous user behavior. Analyzed insider-threat scenarios and fraud risks and proposed a secure, scalable architecture for financial environments.

#### Cybersecurity Research & Secure Development

Completed academic and research work involving Linux, Python, secure code review, secure coding, ethical hacking, penetration testing, application security and vulnerability analysis. Python used for security-focused programming and analysis and reviewed code for potential security weaknesses and remediation opportunities.

## SECURITY RESEARCH & SECURITY-FOCUSED PROJECTS

### Secure AI Prompt Gateway

Developed a security-focused gateway concept for inspecting AI prompts before submission and identifying sensitive information and security risks.

Implemented detection and sanitization concepts for API keys, passwords, PII and confidential information, with security placeholders for sensitive values.

Built security-oriented API and browser-extension components and implemented audit/security logging concepts for prompt inspection.

Investigated prompt injection, sensitive-data exposure and information leakage risks in AI applications.

### MSc Research – Security, Privacy & Reliability of Rag-Based Hotel Chatbots

Researched security, privacy and reliability challenges in knowledge-grounded conversational AI for hotel customer service.

Investigated prompt injection, information leakage, unauthorized disclosure, knowledge manipulation and sensitive-data protection.

Compared Baseline LLM, RAG and Secure RAG approaches using security, reliability and response-quality considerations.

Studied outdated and conflicting knowledge in RAG systems using metadata such as date, effective date, version, source and authority.

### Security Application Development & Secure Encryption Research

Developed and researched security-focused applications using secure software development principles and security controls.

Applied Linux, Python, secure code review, secure coding, vulnerability analysis and application security concepts.

Conducted research into secure encryption and cryptographic protection of sensitive information and evaluated security risks associated with unauthorized access.

### SecureCare – Security Management & Incident Reporting Application

Developed a security-focused web application supporting security policy management, incident reporting, security awareness training, and compliance monitoring.

Implemented incident reporting and security officer workflows to support the recording, reviewing, and management of security incidents.

Developed modules for policy acknowledgement, policy compliance tracking, security quizzes, training management, and user awareness activities.

Built security reporting functionality including incident, policy compliance, quiz performance, and training reports, with Excel/PDF export capabilities.

Applied secure software development and application security principles while developing security-related functionality and workflows.

## EDUCATION

### BSc in Information Technology – Cybersecurity | SLIIT University | 2021–2025

Relevant areas: Network Security, Digital Forensics, Ethical Hacking, Penetration Testing, Secure Coding, Incident Response, Cyber Law and Application Security.

## CERTIFICATIONS

### Cybersecurity / Offensive Security

- Cisco Networking Academy – **Ethical Hacker** (2024)
- Hack & Fix – **Certified Phishing Prevention Specialist (CPPS)** (2025)
- Palo Alto Networks – **Cybersecurity Fundamentals** (2024)
- Cisco Networking Academy – **Introduction to Cybersecurity** (2023)

### Security Operations & Technical Training

- CyberExam – **Detection Engineering; Frontline Cybersecurity; Secure Code Development**
- **Endpoint Detection and Response; Foundation of Log Analysis for Cyber Defense**
- **Vulnerability Management; Introduction to Python for Defensive Security**
- **Introduction to Python for Offensive Security**

### Enterprise / Vendor Security

- Netskope – Administrator Accreditation; Integrator Accreditation; Support Essentials Accreditation
- Trellix – Endpoint Security, Data Security & Email Security Technical Specialist
- Sophos – Engineer; Technician
- ManageEngine – Associate Level for UEM and Security
- SOTI – MobiControl Administrator; Support Technician; Solutions Architect

## SOC RELEVANT STRENGTHS

- SIEM alert monitoring, investigation, log analysis and event correlation
- Vulnerability and risk assessment with remediation-focused reporting
- Threat detection, IOC analysis, investigation and incident-response support
- Enterprise endpoint, DLP, SASE/SSE, IAM and MDM security technologies
- Ethical hacking, penetration-testing concepts and application security
- Linux and Python through cybersecurity projects and research
- Secure code review, secure development and AI application security
- Client/vendor communication, technical walkthroughs and security documentation
